

Dataset 1. Journals and numbered monograph series (n=2,507), including the volume(s) and issue(s) with 2008 cover dates which were searched for new species descriptions.

Abbreviations: The 989 titles marked with either @ or an asterisk (*) included new species descriptions in the 2008 issue(s), demonstrating the wide-spread nature of the taxonomic literature. Data for the new species in the 2008 issues of the 819 titles marked with @ were included in this study. The 170 titles marked with an asterisk (*) are known (from secondary sources¹) to have published new species descriptions in the 2008 issues, but were not available to us for extraction of relevant geographic information. Consequently, data for the new species from these titles are not included in this study. An “X” in the **Done** column indicates either (i) that all issues expected for 2008, based on the publication frequency of the journal, were consulted; or (ii) that no volumes/issues were produced for 2008. The latter category included periodicals with irregular frequency, such as *Smithsonian Contributions to Botany*, for which vol. 91 has a cover date 2001, while vol. 92 has a cover date 2009. Institutional abbreviations are: **UCB** and **UCD** for University of California, Berkeley and Davis, respectively; **CAS** for California Academy of Sciences; and **ZR** for Zoological Record, which was used to verify whether issues for 2008 had been published for certain titles.

¹Secondary sources included: Biosis, CAB Abstracts, International Plant Name Index (IPNI), Mycobank, Wikispecies, and Zoological Record

New sp?	2008 done	Volumes & issues with 2008 cover dates	Title of journal or numbered monograph series
	X	4-5	Abc Taxa
